

SIA LICENCE HOLDERS REPORT 2026

2026 edition · SIA data, 2021 to 2026

WHO HOLDS AN SIA LICENCE?

The people behind the licence. How Britain's licensed security population is changing, from the latest monthly figures to the five year picture.

446,600 active licence holders
507,263 active licences

October 2026 snapshot. People and licences are different counts.

Keep the context with the finding 45

01 | The big picture

More licence holders than five years ago. A decline in the latest year.

Recent snapshot	Active holders
August 2026	450,364
September 2026	447,558
October 2026	446,600

The SIA recorded 57,486 more licence holders in October 2026 than in October 2021. But the latest annual comparison shows a fall of 11,967. Both changes matter.

A licence is permission to work. It is not proof of employment.

Some holders may work part time, hold a licence for future use, or work outside security. These figures cannot tell us how many officers are on shift, how many jobs are vacant, or why someone did not renew.

Why compare the same month?

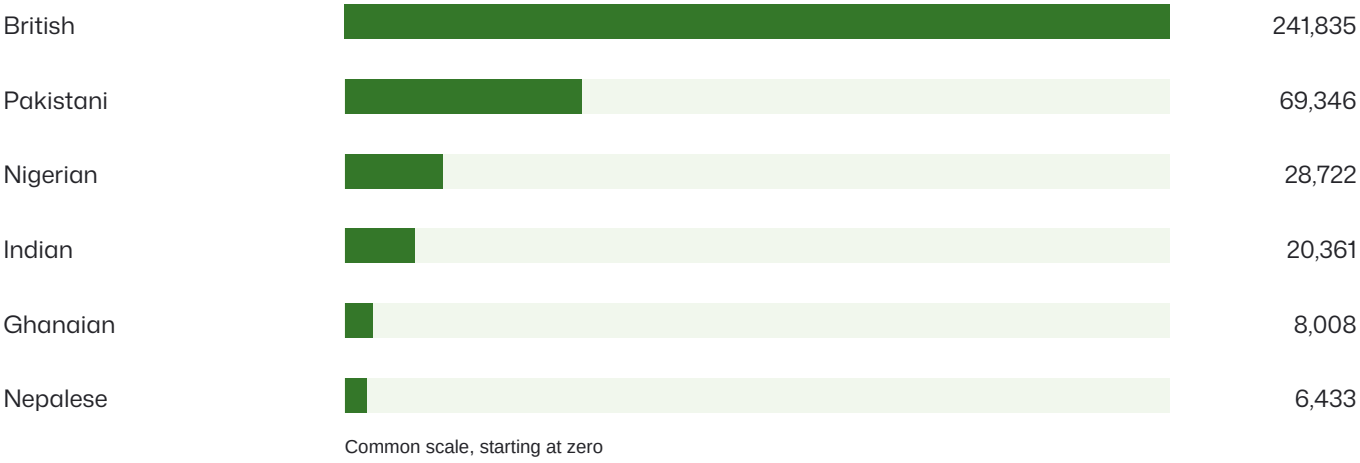

Using October each year reduces the risk of comparing different seasonal points. It does not remove every timing effect. Licence renewal cycles and administrative changes can still affect the figures.

What does the decline mean?

There were fewer people with an active licence at the latest snapshot. The data does not show whether this reflects fewer new applicants, more expiries, revocations or other changes. A claim of a staffing shortage would need separate evidence.

02 | Recorded nationality

The mix has changed. The time frame matters.

Largest six categories, October 2026. Every published category and snapshot appears in the appendix.

British remains the largest recorded nationality category, at 54.2% of all holders. Its share was 67.8% in October 2021. Explore the counts as well as the percentages.

Why a single comparison can mislead

The Nigerian category grew strongly over five years and rose over the latest year. Yet it fell between August and October 2026. Each statement is true. The dates change the story.

The five year change is much larger than the latest annual movement.

Between October 2021 and October 2026, the British category fell by 22,091. All other recorded categories combined grew by 79,577. These are net changes between two snapshots, not counts of arrivals or departures.

Read count and share together

A category can fall in number while rising as a share of the total, if the rest of the population falls faster. Compare both measures before describing a group as growing or shrinking.

What nationality cannot tell us

Recorded nationality is not ethnicity, place of birth or immigration status. It does not measure ability, training quality or experience. The data cannot establish why the composition changed.

Nigerian category count change: +18,931 between October 2021 and October 2026; +1,070 between October 2025 and October 2026; -316 between August and October 2026.

03 | Age

A younger licensed population

Age band	October 2021	October 2026	2026 share
18-24	36,621	60,818	13.6%
25-34	91,463	132,619	29.7%
35-44	97,686	96,809	21.7%
45-54	86,863	77,456	17.3%
55-64	61,011	59,594	13.3%
65+	15,470	19,304	4.3%

People under 35 account for 43.3% of holders, up from 32.9% in October 2021. The biggest age group is 25 to 34, with 132,619 people.

of holders are under 35
Up from 32.9% in October 2021

What this shift tells us

Younger holders now make up a larger part of the licensed population. The under 35 count grew by 51.0%, compared with 14.8% growth in the total population.

These snapshots do not show whether people are joining earlier or older holders are leaving. Following entrants and renewals would help answer that.

Age mix is not experience.

A 25 year old may have several years in security. A 55 year old may be entering for the first time. The SIA age table does not record career length.

04 | Women in security

Women's participation has grown over five years

Snapshot	Female holders	Share of all holders
2021	40,110	10.3%
2025	50,098	10.9%
2026	49,816	11.2%

Licence type	Female share, October 2026
CCTV	12.6%
Door Supervision	10.8%
Close Protection	6.9%

The number of women with an active licence is higher than five years ago. Their share has increased more slowly, from 10.3% to 11.2%.

9,706 more women than October 2021; 282 fewer than October 2025.

Count and share tell different stories

The female count is 24.2% higher than in October 2021. Over the latest year, it fell slightly, while women's share rose because the total holder population fell faster.

Source: SIA gender tables. Published categories: Female and Male. October 2026 male holders: 396,784.

What the numbers leave open

A licence shows eligibility for regulated work. It does not show access to shifts, pay, promotion or safety at work.

Reading licence participation alongside employment and retention would give a fuller picture of women's careers in security.

A small monthly change is not a trend.

The female count fell from 50,098 in August to 49,816 in October 2026. Between September and October it rose by just five. The longer view is more useful than treating that small movement as a turning point.

05 | Licence types

Licence types are moving in different directions

Licence type	Oct 2025	Oct 2026	Change
Door Supervision	368,843	356,313	-3.4%
Public Space Surveillance (CCTV)	64,428	67,778	+5.2%
Security Guarding	56,991	57,421	+0.8%
Close Protection	11,535	11,809	+2.4%
Non-Frontline	8,765	8,373	-4.5%
Cash and Valuables in Transit	4,815	4,584	-4.8%
Key Holding	1,164	968	-16.8%
Vehicle Immobilisation	16	17	+6.2%

There is no single direction across licence types. CCTV licences rose 5.2% over the year, while door supervision licences fell 3.4%.

Active licences

Individual holders

One person can hold several licences

For example, someone with both a door supervision licence and a CCTV licence appears twice in the licence total, but once in the holder total.

Door supervision still dominates

Its 356,313 licences account for 70.2% of all active licences in October 2026. A relatively small percentage movement in this large category can outweigh growth in several smaller categories.

CCTV moves in the other direction

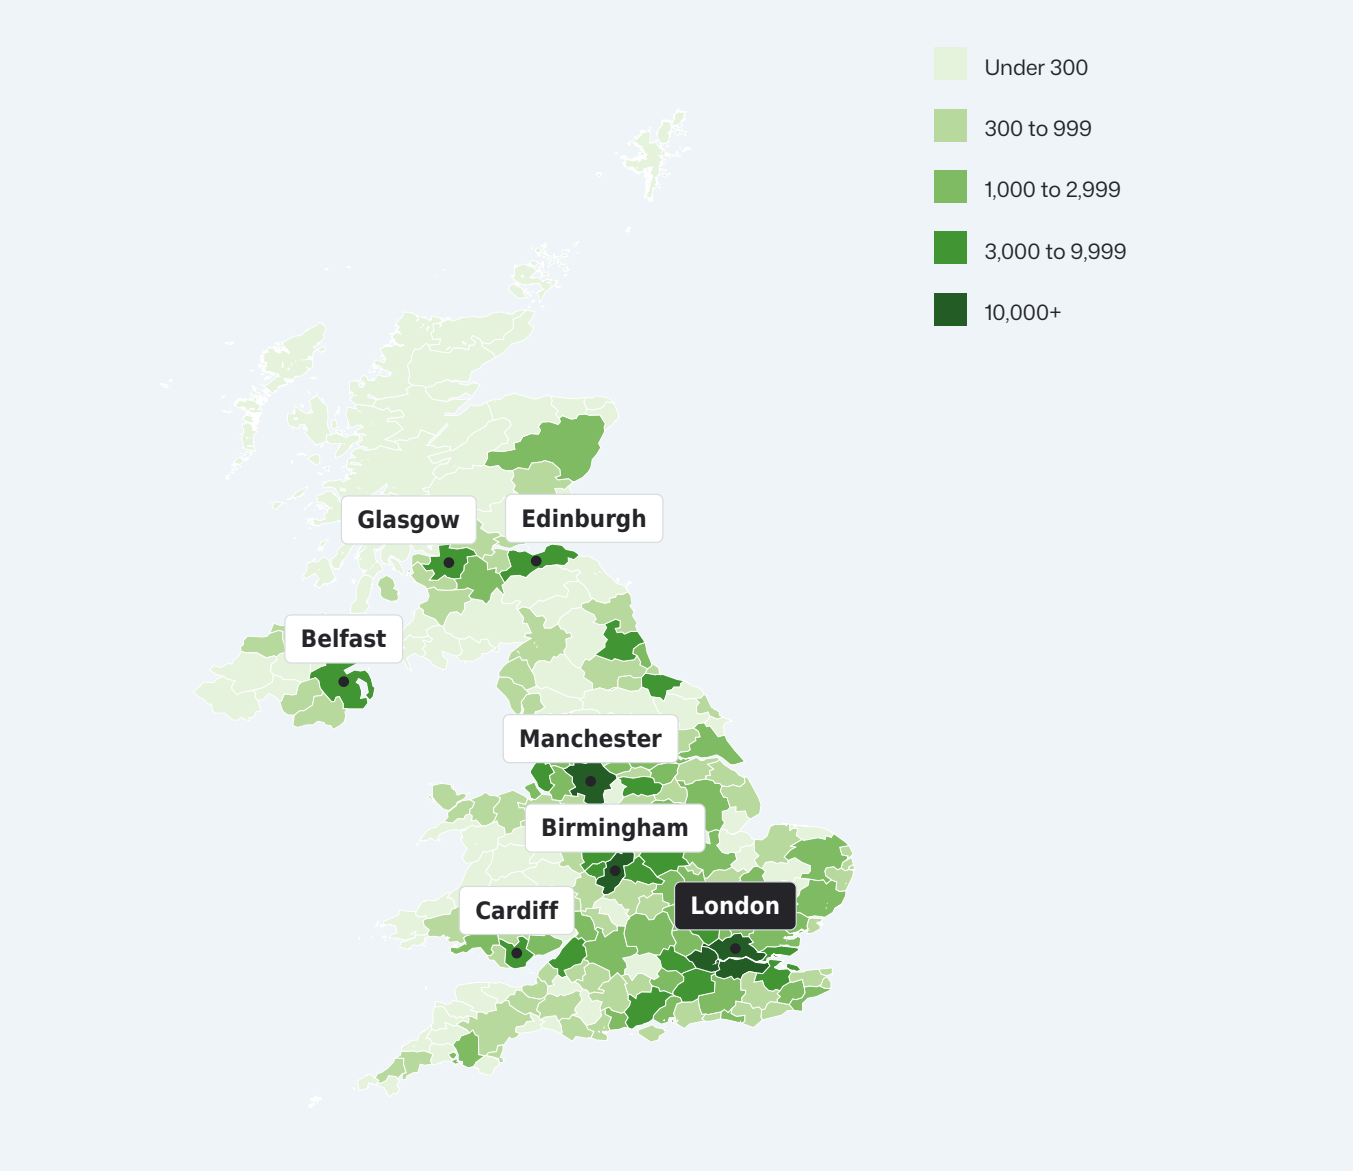

CCTV licences rose from 64,428 to 67,778 over the year. They also rose across the latest three monthly snapshots, from 67,481 in August to 67,778 in October.

Licences do not measure labour demand.

Growth in a licence category does not establish that jobs, hours or wages increased. Employment evidence is needed to make that connection.

06 | The local picture

Four areas account for 45.6% of all holders.

October 2026 holder counts by ONS 2011 travel to work area. Counts are not population rates. 228 named areas are mapped; 809 records without an area remain in the national total. Contains National Statistics and OS data © Crown copyright and database right.

Explore an area in the interactive map

All 229 rows, including the unrecorded area category, appear in the appendix.

London, Manchester, Birmingham, and Slough and Heathrow together account for 203,666 holders. The SIA groups areas by commuting patterns, not council boundaries.

Where a holder is recorded is not necessarily where they work.

Officers may travel between areas or work across several sites. These counts do not measure available staff, vacancies or security coverage. Comparing them with crime rates would not establish whether an area has enough officers.

07 | Sources and methods

Clear sources. Repeatable calculations.

This report analyses the SIA's published licence holder workbooks. We use the same reporting month across six years, add the latest three monthly snapshots, and keep the source's definitions visible, so the findings can be checked and reused.

Download the original sources

How to read this report

What is counted?

Demographic tables count people with an active SIA licence at the snapshot date. Sector tables count active licences. The two totals are different because people may hold more than one licence. Neither measures employment.

How are changes calculated?

Count change is the latest count minus the earlier count. Percentage change is that difference divided by the earlier count, multiplied by 100. Share is the category count divided by the total holder count for that year. Percentages are rounded to one decimal place in the story. Share changes are percentage points. Missing categories are left unavailable, not silently treated as zero.

Which dates are compared?

Snapshot dates are 1 October 2021, 3 October 2022, 2 October 2023, and 1 October in 2024, 2025 and 2026. The recent comparison adds 1 August and 1 September 2026. These are snapshots, not annual averages. The latest workbook was published on 22 October 2026. This mockup was prepared on 3 November 2026.

What did the source checks find?

Nationality, age, gender and sector totals reconcile across all eight workbooks. The October 2025 regional table contains 458 rows for 229 area labels and a reported total of 916,328, inconsistent with the holder total of 458,567. We exclude that table rather than choose between conflicting duplicate values. The October 2023 age table contains one age zero record, retained as "Unknown / invalid age".

How are names and categories handled?

Nationality labels are retained as published, including unusual spellings and categories such as "Other" and "Not Known". Blank labels are displayed as "Unspecified". We do not combine similar labels across years. Region labels refer to travel to work areas. An absent earlier category is shown as unavailable for comparison.

What does the data leave unanswered?

It cannot explain motives, migration patterns, recruitment quality, actual employment, pay, vacancies or reasons for leaving. The published tables do not provide a combined breakdown of nationality by age, gender, area and role. We do not infer those relationships from separate totals.

How is the interactive map built?

All 228 named SIA areas match the ONS 2011 travel to work area boundaries. We simplify the boundaries for a faster map while retaining every area. These are commuting areas, not council or city boundaries. Records with no area are kept in the data table and national total, but cannot be placed on the map.

Count colours show the number of holders, not the number per resident. Change colours compare each selected snapshot with August 2026. A large percentage movement in a small area can represent only a few people, so read the count and percentage together. Areas are ranked by holder count, excluding the unnamed category.

Who produced this analysis?

This is a Get Licensed report concept using official SIA data. Get Licensed provides security training and has a commercial interest in the industry. Named author and independent editorial review must be confirmed before public publication. This private mockup is not a published research release.

08 | Questions, answered

How many SIA licence holders are there in the UK?

The SIA recorded 446,600 active licence holders on 1 October 2026. That is the number of people in the regulator's licence holder dataset, not the number currently employed in security.

• One year earlier: 458,567 holders in October 2025. The count fell by 11,967, or 2.6%.

• Five years earlier: 389,114 holders in October 2021. The count rose by 57,486, or 14.8%.

Both comparisons are valid: the population is larger than five years ago but smaller than a year ago. These are dated snapshots, not annual averages. They do not count shifts worked, vacancies or people actively looking for work.

Source: SIA licence holder demographics, October 2021 to October 2026.

What percentage of SIA licence holders are British?

54.2% of SIA licence holders were recorded as British in October 2026, equivalent to 241,835 people. British was the largest recorded nationality category. Its share was 67.8% in October 2021.

The British count fell by 22,091 over those five years, while all other recorded nationality categories combined grew by 79,577. Those are net differences between two snapshots. They are not counts of people arriving in or leaving the UK.

Recorded nationality is not ethnicity, country of birth or immigration status. It also does not measure experience, ability or training quality. Read the count and the share together, because a group's share can rise even when its count falls.

Source: SIA licence holder demographics, October 2021 to October 2026.

How many women hold an SIA licence?

The October 2026 SIA gender table records 49,816 female licence holders, or 11.2% of all 446,600 holders. That is approximately one in nine.

• Five year comparison: the count rose from 40,110 in October 2021, an increase of 9,706, or 24.2%.

• Annual comparison: the count fell by 282 from 50,098 in October 2025.

The female share still rose over the latest year because the total holder population fell faster. The published categories are Female and Male. These figures describe licence participation, not women's employment rate, pay, access to shifts or experience at work.

Source: SIA licence holder demographics, October 2021 to October 2026.

Which SIA licence type is most common?

Door Supervision is the largest licence category, with 356,313 active licences in October 2026. It accounts for 70.2% of the 507,263 active licences in the SIA sector table.

The annual picture differs by category. Door Supervision fell by 12,530 licences, or 3.4%, from October 2025. Public Space Surveillance (CCTV) rose by 3,350, or 5.2%, to 67,778 licences.

These are licence counts, not separate groups of people. A person can hold more than one type, so adding sector counts does not give a headcount. Growth in a licence category alone also does not prove that jobs, hours or wages in that role increased.

Source: SIA licence holder demographics, October 2021 to October 2026.

What is the age profile of SIA licence holders?

People aged under 35 account for 43.3% of SIA licence holders in October 2026, up from 32.9% in October 2021. The count increased from 128,084 to 193,437 across those snapshots.

The largest single age band in October 2026 is 25 to 34, with 132,619 people, or 29.7% of all holders. Taken together, the figures show a younger age mix within the licensed population.

They do not tell us whether people are entering the industry earlier or whether older holders are leaving. Age is also not a measure of experience: an older licence holder may be a new entrant. Answering those questions requires data that follows people over time.

Source: SIA licence holder demographics, October 2021 to October 2026.

Which area has the most SIA licence holders?

London has the largest recorded count, with 125,459 holders in October 2026, or 28.1% of the national total. Manchester, Birmingham, and Slough and Heathrow are the next three largest areas. Together, these four account for 203,666 holders, or 45.6%.

The SIA uses travel to work areas, which group places by commuting patterns. They are not the same as city or council boundaries. The map matches all 228 named areas to ONS boundaries; a further 809 records have no area recorded and remain in the table and national total.

An area count does not show where those people work or how many officers are available for a shift. Officers may travel across area boundaries.

Source: SIA licence holder demographics, October 2021 to October 2026.

Do falling licence holder numbers mean there is a security staffing shortage?

No. A fall in active licence holders does not, by itself, establish a staffing shortage. The October 2026 count is 11,967 lower than October 2025, but the SIA snapshots do not explain what caused that change.

A lower count could reflect a combination of new applications, expiries, renewals, revocations or other changes. The demographic tables do not separate those flows. Some licence holders may work part time, work outside security or keep a licence for future use.

To assess a shortage, we would also need evidence on vacancies, recruitment difficulties, hours worked and employer demand. The report therefore describes the change in licensing without treating it as proof of a change in employment.

Source: SIA licence holder demographics, October 2021 to October 2026.

Where does this report's data come from, and can I reuse it?

The underlying figures come from the Security Industry Authority's published SIA licence holder demographic workbooks. This report compares October snapshots from 2021 to 2026 and adds August and September 2026 for the recent monthly view.

The complete CSV includes category counts, snapshot dates and links to the original workbooks. The PDF preserves the narrative and tables in a static format. When reusing a figure, include its snapshot date, say whether it counts people or licences, and name the SIA as the underlying source.

One source exception matters: the October 2025 area table contains conflicting duplicate rows and is excluded from regional comparisons. The report's methods section explains this and the other calculation rules.

Source: SIA licence holder demographics, October 2021 to October 2026.

09 | Complete data tables

The following tables retain every recorded category. Blank labels are shown as Unspecified (nationality) or Area not recorded (geography). NA means the source did not contain that category, not zero. Nationality labels are retained as published.

Sources: the eight linked SIA workbooks in Sources and methods. Annual columns use October snapshots. Recent columns use August, September and October 2026. Counts are people except licence sector tables.

Table group	Coverage	What it counts
Nationality	Eight snapshots	People, source labels retained
Age and gender	Eight snapshots	People
Licence types	Eight snapshots	Licences, not unique people
Areas	Three recent and five valid annual snapshots	People by travel to work area

Reading the appendix

Use the national holder total for demographic shares. Use the licence total for sector shares. Rounded percentages may not add to exactly 100%. A category missing from a source remains NA, so comparisons must not treat it as zero.

The tables contain raw counts so that comparisons can be reproduced. Percentage change is the later count minus the earlier count, divided by the earlier count and multiplied by 100. A change in share is measured in percentage points.

Keep the context with the finding

Suggested source attribution: Security Industry Authority, SIA licence holder demographics, October 2026. Snapshot: 1 October 2026.

A licence is permission to work, not evidence of employment. Recorded nationality is not ethnicity or immigration status. A travel to work area is not a city boundary. Keep these definitions with any reused figures.
